Skin Audit — Technical Infrastructure & Operations Document

Current Infrastructure Status

The founder owns and controls all core infrastructure accounts for the Skin Audit MVP.
The engineer has collaborator/developer access where required.
Production secrets are stored in Vercel Environment Variables and are NOT stored in GitHub.

SKIN AUDIT — CURRENT TECH STACK / INFRASTRUCTURE STATUS

1. GitHub

Purpose

Source code repository and version control.

Owner

ANTIDOTE508

Repository

ANTIDOTE508/SKINAUDIT

Cost

Free

Current Status

Repository created and connected to Vercel.

Engineer Access

Engineer added as GitHub collaborator with repository write access.

Development Workflow

The engineer works directly through GitHub using:

- feature branches
- pull requests
- preview deployments

The founder retains final control by reviewing and merging approved pull requests into the main branch.

Important Notes

The repository should remain PRIVATE during MVP development.

No production secrets, API keys, database credentials, or environment variables should ever be committed into GitHub.

T E C H I N F R A S T R U C T U R E

2. Vercel

Purpose

Frontend hosting, deployments, CI/CD pipeline, environment variables, and production deployment management for the Skin Audit MVP.

Team

SKIN AUDIT

Project

skin-audit-mvp

Team ID

team_mcR3bUpEWsZDJVeUmyyPevDI

Current Billing

Item	Status
Plan	Vercel Hobby
Base Cost	\$0/month
Billing Type	Free Hobby plan
Developer Seats	None
On-Demand Budget	No longer applicable on Hobby plan

Current Infrastructure Structure

The infrastructure was intentionally simplified during MVP development to:

- eliminate unnecessary recurring platform costs
- avoid shared credentials
- preserve founder ownership/control
- reduce operational complexity

Current structure:

- founder remains sole Vercel owner
- no additional Vercel team seats
- engineer works through GitHub collaborator access only
- deployments triggered automatically through GitHub integration

Deployment Workflow

Engineer Workflow

Engineer:

- pushes code to feature branches
- creates pull requests
- generates Vercel preview deployments automatically through GitHub integration

Founder Workflow

Founder:

- reviews pull requests
- merges approved changes into main branch

T E C H I N F R A S T R U C T U R E

Production Deployment

When code is merged into the main branch:

- Vercel automatically deploys the latest production version

Current Status

- Project successfully created
- Connected to GitHub repository:
ANTIDOTE508/SKINAUDIT
- Environment variables configured
- Deployment pipeline connected
- Ready for Next.js application deployment
- Preview deployment workflow active

Ownership Structure

Founder retains ownership of:

- billing
- organization control
- infrastructure administration
- deployment approval
- production releases

Engineer receives:

- GitHub repository collaborator access only

3. Vercel Environment Variables

The following variables have already been added inside:

Vercel → Project → Settings → Environment Variables

Added Variables

DATABASE_URL

Purpose

Connects the application backend to the Neon PostgreSQL database.

Source

Neon production connection string.

OPENAI_API_KEY

Purpose

Allows the backend to securely access OpenAI APIs.

Source

Dedicated production OpenAI API key created within the Skin Audit OpenAI project.

Security Architecture

Environment variables are intentionally stored inside Vercel instead of GitHub repositories.

This architecture prevents:

T E C H I N F R A S T R U C T U R E

- leaked API keys
- leaked database credentials
- accidental public exposure
- secrets being committed into source control

Production secrets are therefore isolated from the codebase and managed at the deployment layer.

4. Neon

Purpose

Hosted PostgreSQL database.

Project

skin-audit-prod

Region

AWS Europe Central 1 (Frankfurt)

Plan

Free Tier

Cost

Currently \$0/month

Billing Structure

Usage-based.

Free plan currently includes:

- 0.5 GB storage
- autoscaling compute
- idle scaling to zero

No recurring monthly charge currently.

Current Status

Database created successfully.

Engineer Access

Engineer invited at project-level collaboration.

Used With

Prisma ORM

Vercel Variable Connected

DATABASE_URL

5. OpenAI Platform

Purpose

AI processing and NLP logic.

T E C H I N F R A S T R U C T U R E

Current Planned Use Cases

- ingredient analysis
- skincare recommendation logic
- text matching
- AI assistant logic
- OCR text cleanup if needed

Organization

Theantidoteagency

Project

Skin Audit

Billing Configuration

Current Credit Added

\$30 USD prepaid credits

Auto Recharge

OFF

Current Billing Structure

Usage-based only.

This is NOT a monthly subscription.

The system deducts credits only when API requests are made.

Once credits are exhausted:

- API stops working
- no additional billing occurs unless manually recharged

Current Expected MVP Costs

Very low during early MVP testing.

Likely:

- a few dollars
- to low tens of dollars

depending on:

- OCR usage
- image analysis frequency
- number of AI calls

Engineer Access

Engineer invited as Reader/member-level access.

Vercel Variable Connected

OPENAI_API_KEY

Security Notes

API keys must:

T E C H I N F R A S T R U C T U R E

- never be stored in GitHub
- never be shared in chat/email
- remain inside Vercel Environment Variables

6. Cloudflare R2

Purpose

Image storage for skincare uploads/scans.

Plan

Free Tier

Cost

Currently \$0/month

Billing Structure

Usage-based.

Expected MVP usage should remain inside free tier.

Status

Account created successfully.

Card added for verification purposes.

Expected Future Environment Variables

These have NOT yet been added because engineer implementation may vary:

- R2_ACCESS_KEY_ID
- R2_SECRET_ACCESS_KEY
- R2_BUCKET_NAME
- R2_ACCOUNT_ID
- R2_ENDPOINT

Next Engineer Action

Engineer must confirm:

- bucket naming
- API variable naming
- upload architecture

before variables are added into Vercel.

7. OCR / Scanning

Current Decision

Use free Google ML Kit Text Recognition v2.

Important Constraint

No paid Google Cloud Vision API is being used at MVP stage.

T E C H I N F R A S T R U C T U R E

Architecture Clarification

If MVP is Mobile App

Google ML Kit works well.

If MVP is Web-Only

Engineer must confirm whether another OCR approach is needed.

Message to Engineer

Initially lets use on-device Google ML Kit Text Recognition v2 for OCR. Let me know if the MVP requires web-based OCR instead of mobile on-device OCR.

8. Stripe

Current Status

Deferred.

Reason

The MVP is not processing payments yet and payment infrastructure decisions may depend on future jurisdiction/business structure considerations.

Future Purpose

Stripe will later handle:

- subscriptions
- checkout
- payment processing
- billing

Current Cost

\$0/month

9. Developer Libraries / No Founder Account Needed

These are code libraries installed directly by the engineer.

No founder billing accounts are needed currently.

Included Libraries

- Next.js
- TypeScript
- Tailwind CSS
- Prisma
- Better Auth
- GSAP
- OpenAI SDK

T E C H I N F R A S T R U C T U R E

10. Current MVP Architecture

GitHub

→ source code repository

Vercel

→ deployment + hosting + environment variables

Next.js

→ frontend/backend application framework

Neon PostgreSQL

→ database

Prisma

→ database ORM layer

OpenAI API

→ AI/NLP logic

Cloudflare R2

→ image storage

Google ML Kit

→ OCR/scanning

Better Auth

→ authentication

GSAP

→ animations

11. Security & Ownership Rules

Founder retains ownership of:

- GitHub
- Vercel
- Neon
- OpenAI
- Cloudflare
- future Stripe

Engineer receives collaborator/developer access only where required.

Secrets Management Rules

Secrets should ONLY exist in:

- Vercel Environment Variables
- secure password manager if required

Secrets should NEVER exist in:

- GitHub commits
 - screenshots
 - public docs
 - Slack/email/chat
-

T E C H I N F R A S T R U C T U R E

12. Current Active Costs Summary

Service	Current Cost Structure	Estimated Current Cost
GitHub	Free	\$0
Vercel Hobby	Free	\$0
Neon	Usage/free tier	\$0
OpenAI API	Usage/prepaid credits	Up to \$30 currently loaded
Cloudflare R2	Usage/free tier	\$0
Stripe	Deferred	\$0

13. Current Engineering Tasks

1. Push initial Next.js application.
2. Confirm Vercel deployment pipeline.
3. Connect Prisma to Neon via DATABASE_URL.
4. Connect OpenAI via OPENAI_API_KEY.
5. Configure Better Auth.
6. Configure Cloudflare R2 buckets/API.
7. Configure image upload flow.
8. Confirm OCR implementation architecture.
9. Deploy first working MVP build.
